Consumer Confidence Report – 2021

Covering Calendar Year – 2020

This brochure is a snapshot of the quality of the water that we provided last year. Included are the details about where your water comes from, what it contains, and how it compares to Environmental Protection Agency (EPA) and state standards. We are committed to providing you with information because informed customers are our best allies. If you would like to observe the decision-making process that affect drinking water quality, please call RAE CORWELL at 304-738-9552.

Your water comes from :

Source Name	Source Water Type
INTAKE-PATTERSON CREEK	Surface Water
WELL #1	Ground Water

Buyer Name	Seller Name
There are no additional purchases to display.	

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides, which may come from a variety of sources such as storm water run-off, agriculture, and residential users.

Radioactive contaminants, which can be naturally occurring or the result of mining activity.

Organic contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also come from gas stations, urban storm water run-off, and septic systems.

In order to ensure that tap water is safe to drink, EPA prescribes regulation which limits the amount of certain contaminants in water provided by public water systems. We treat our water according to EPA's regulations. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Our water system has an estimated population of 5626 and is required to test a minimum of 6 samples per month in accordance with the Total Coliform Rule for microbiological contaminants. Coliform bacteria are usually harmless, but their presence in water can be an indication of disease-causing bacteria. When coliform bacteria are found, special follow-up tests are done to determine if harmful bacteria are present in the water supply. If this limit is exceeded, the water supplier must notify the public.

Water Quality Data

The following tables list all of the drinking water contaminants which were detected during the 2020 calendar year. The presence of these contaminants does not necessarily indicate the water poses a health risk. Unless noted, the data presented in this table is from the testing done January 1- December 31, 2020. The state requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) included rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in sources water before we treat it include:

Terms & Abbreviations

Maximum Contaminant Level Goal (MCLG): the "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL): the "Maximum Allowed" MCL is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Secondary Maximum Contaminant Level (SMCL): recommended level for a contaminant that is not regulated and has no MCL.

Action Level (AL): the concentration of a contaminant that, if exceeded, triggers treatment or other requirements.

Treatment Technique (TT): a required process intended to reduce levels of a contaminant in drinking water.

Maximum Residual Disinfectant Level (MRDL): the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Non-Detects (ND): lab analysis indicates that the contaminant is not present.

Parts per Million (ppm) or milligrams per liter (mg/l)

Parts per Billion (ppb) or micrograms per liter (µg/l)

Picocuries per Liter (pCi/L): a measure of the radioactivity in water.

Millirems per Year (mrem/yr): measure of radiation absorbed by the body.

Monitoring Period Average (MPA): An average of sample results obtained during a defined time frame, common examples of monitoring periods are monthly, quarterly and yearly.

Nephelometric Turbidity Unit (NTU): a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person. Turbidity is not regulated for groundwater systems.

Running Annual Average (RAA): an average of sample results obtained over the most current 12 months and used to determine compliance with MCLs.

Locational Running Annual Average (LRAA): Average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters.

Testing Results for: FRANKFORT PSD

Microbiological	Result	MCL	MCLG	Typical Source
No Detected Results were Found in the Calendar Year of 2020				

Regulated Contaminants	Collection Date	Highest Value	Range (low/high)	Unit	MCL	MCLG	Typical Source
2,4-D	6/24/2020	0.1	0 - 0.1	ppb	70	70	Runoff from herbicide used on row crops
BARIUM	6/24/2020	0.031	0.031	ppm	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
DI(2-ETHYLHEXYL) PHTHALATE	6/17/2020	0.7	0 - 0.7	ppb	6	0	Discharge from rubber and chemical factories
HEXACHLOROCYCLOPENTADIENE	3/19/2020	0.01	0 - 0.01	ppb	50	50	Discharge from chemical factories
NITRATE	6/24/2020	0.7	0.7	ppm	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
NITRATE-NITRITE	2/12/2019	0.84	0.59 - 0.84	ppm	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Monitoring Period	Highest LRAA	Range (low/high)	Unit	MCL	MCL G	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	PATTERSON CR-DON WELKER	2020	20	0.0078 - 0.0102	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	SCENIC LANE	2020	22	0.0051 - 0.0129	ppb	60	0	By-product of drinking water disinfection
TTHM	PATTERSON CR-DON WELKER	2020	40	0.0301 - 0.0536	ppb	80	0	By-product of drinking water chlorination
TTHM	SCENIC LANE	2020	38	0.0223 - 0.0527	ppb	80	0	By-product of drinking water chlorination

Lead and Copper	Monitoring Period	90 th Percentile	Range (low/high)	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2020	0.121	0 - 0.719	ppm	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2020	0.89	0 - 5.9	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Chlorine/Chloramines	MPA	MPA Units	RAA	RAA Units
Maximum Disinfection Level				
12/01/2020 - 12/31/2020	2	MG/L	1.2	MG/L

Unresolved Deficiency Date Identified	Facility	Comments
02/16/2018	WATER SYSTEM	
02/16/2018	DAWN VIEW	tank is in poor condition needing painting and repairs
02/16/2018	DISTRIBUTION SYSTEM	

Total Organic Carbon Lowest Month for Removal	Collection Date	Highest Value	Range	Unit	TT	Typical Source
CARBON, TOTAL	1/9/2020	0.85	0 - 0.85	MG/L	0	Naturally present in the environment

Analyte	Facility	Highest Value	Unit of Measure	Month Occurred
TURBIDITY	TREATMENT PLANT-PATTERSON CREEK	0.230	NTU	MAR 2020

Radiological Contaminants	Collection Date	Highest Value	Range (low/high)	Unit	MCL	MCLG	Typical Source
GROSS ALPHA, EXCL. RADON & U	6/17/2020	2.09	0.675 - 2.09	pCi/L	15	0	Erosion of natural deposits

Secondary Contaminants-Non Health Based Contaminants-No Federal Maximum Contaminant Level (MCL) Established.	Collection Date	Highest Value	Range (low/high)	Unit	SMCL
ALKALINITY, TOTAL	1/9/2020	56	56	MG/L	10000
CALCIUM	5/30/2018	77.5	77.5	MG/L	
CARBON, TOTAL	1/9/2020	0.85	0 - 0.85	ppm	10000
NICKEL	6/24/2020	0.0015	0.0015	MG/L	0.1
ORTHOPHOSPHATE	5/30/2018	0.43	0.43	MG/L	
PH	5/30/2018	7.2	7.2	SU	8.5
SILICA	5/30/2018	4.27	4.27	MG/L	
SODIUM	6/24/2020	6.33	6.33	MG/L	1000

During the 2020 calendar year, we had the below noted violation(s) of drinking water regulations.

Compliance Period	Analyte	Comments
10/1/2020	CONSUMER CONFIDENCE RULE	CCR ADEQUACY/AVAILABILITY/CONTENT
7/1/2020	CONSUMER CONFIDENCE RULE	CCR REPORT
1/1/2020 - 3/25/2020	LEAD & COPPER RULE	FOLLOW-UP OR ROUTINE TAP M/R (LCR)
9/1/2020 - 11/30/2020	TRICHALOMETHANES	MONITORING, ROUTINE (DBP), MAJOR
9/1/2020 - 11/30/2020	HALOACETIC ACIDS	MONITORING, ROUTINE (DBP), MAJOR
10/1/2020 - 12/31/2020	CARBON, TOTAL	MONITORING, ROUTINE (DBP), MAJOR
10/1/2020 - 12/31/2020	ALKALINITY, TOTAL	MONITORING, ROUTINE (DBP), MAJOR
10/1/2020 - 12/31/2020	CARBON, TOTAL	MONITORING, ROUTINE (DBP), MAJOR

11/1/2020 - 11/30/2020	TURBIDITY	MONITORING, ROUTINE (IESWTR/LT1), MINOR
1/1/2020 - 3/31/2020	RADIONUCLIDES	MONITORING, ROUTINE MAJOR
1/1/2020 - 3/31/2020	VOLATILE ORGANICS	MONITORING, ROUTINE MAJOR
1/1/2020 - 3/31/2020	SYNTHETIC ORGANICS 2	MONITORING, ROUTINE MAJOR
1/1/2020 - 12/31/2020	NITRATE	MONITORING, ROUTINE MAJOR
1/1/2020 - 12/31/2020	VOLATILE ORGANICS	MONITORING, ROUTINE MAJOR
7/1/2020 - 9/30/2020	RADIONUCLIDES	MONITORING, ROUTINE MAJOR
7/1/2020 - 9/30/2020	SYNTHETIC ORGANICS 2	MONITORING, ROUTINE MAJOR
7/1/2020 - 9/30/2020	VOLATILE ORGANICS	MONITORING, ROUTINE MAJOR
10/1/2020 - 12/31/2020	RADIONUCLIDES	MONITORING, ROUTINE MAJOR
10/1/2020 - 12/31/2020	SYNTHETIC ORGANICS 2	MONITORING, ROUTINE MAJOR
10/1/2020 - 12/31/2020	VOLATILE ORGANICS	MONITORING, ROUTINE MAJOR
8/13/2020	PUBLIC NOTICE	PUBLIC NOTICE RULE LINKED TO VIOLATION

There are no additional required health effects notices.

There are no additional required health effects violation notices.

Water System	Type	Category	Analyte	Compliance Period
